Table: List of Orders (1,500 rows) Column: YTD Sale (0 distinct values)

Table in revenue per order In overall sale year and month wish calculate measure use YTD sale = TOTALYTD(sum('list of order'[revenue per month]),'List of order'[order date]) YTD sale create card visualization.

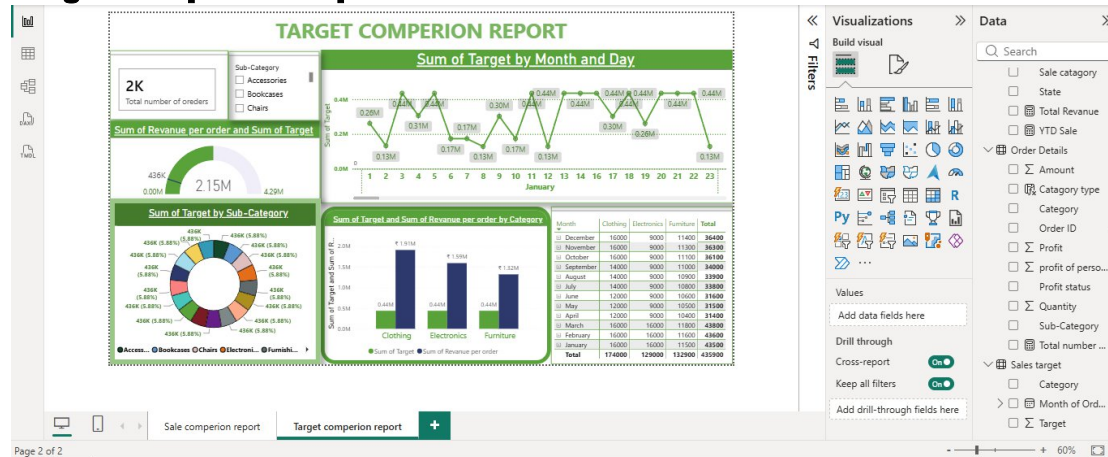

Data Visualization:-

Sale compertion report

- Stacked area chart use revenue per order YTD in month wash create visual sale analysis.
- Table visualization use state wash order in count find create order analysis.
- Category wash total revenue donut chart use in analysis.
- Scatter chart use sub category wash order quantity in visualization analysis.
- State column use slicer created.
- category use in slicer create all chart connected visual.
- Quantity use in slicer create all chart connected visual.
- Total revenue and YTD sale calculate measure card visual

Target compertion report

- Line chart use date with month wash target revenue created visual in analysis.
- Sub category 17 wash total target average 12k sale in find it Identity.
- Clustered column chart use in total number of revenue and revenue target comparative visual that analysis
- Gauge chart use in find total revenue and target differentiation identify achievement.
- Total target in month and category wash created matrix chart vishal the analysis.
- Sub category use in slicer create all chart connected visual.
- Order id total overall count in calculate measure visual card create.

NOTE ; Finally sale in target achieved. Target rs435900.00 but sale rs2146870.00.so sale in rs1710970.00 highest achieved.
